

# Type 627F Pilot-Operated Pressure Reducing Regulator

W5607-1

W5641-1

Figure 1. Type 627F Pressure Reducing Regulators

## Introduction

The Type 627F pilot-operated (Type 6351F pilot) pressure reducing regulator (Figure 1) provides superior performance when used in pressure-factor measurement (fixed-factor billing) applications. The Type 627F includes a factory-installed Type 6351F pilot and has external registration that requires a downstream control line.

## Features

- **Accurate for Pressure-Factor Measurement Applications**—Pilot action controls pressure to within  $\pm 1$  percent of the absolute outlet pressure (psia) setting at full valve disk travel, resulting in higher capacity than could be obtained without a pilot. This capability results in low-pressure variations over broad flow ranges and inlet pressure ranges.
- **Easy to Maintain**—Trim parts can be replaced without removing the regulator body from the
- pipeline. A two-bolt connection between the body and diaphragm casing simplifies disassembly for maintenance.
- **Installation Adaptability**—The diaphragm case and/or regulator body can be rotated in any of four positions to allow regulator installation in locations with limited space. The regulator may be installed in any position without affecting operation as long as the spring case vent is protected from the elements.
- **Tamper-Resistant**—An adjusting screw locknut and protective cap (Figure 2) is standard on all Type 6351F pilots to discourage tampering with the pressure setting.
- **Wide Range of Flow Capabilities**—A selection of body and orifice sizes is available to satisfy various flow requirements.
- **Tight Shutoff Capability**—A flat-faced disk of Nitrile (NBR) provides excellent shutoff capability.

# Bulletin 71.2:627F

## Specifications

### Body Sizes and End Connection Styles

Ductile iron: 3/4, 1, or 2 NPT

Steel: 3/4, 1, or 2 NPT;

NPS 1 or 2 / DN 25 or 50, CL150 RF,  
CL300 RF, CL600 RF, PN 16/25/40 RF

### Maximum Inlet and Differential Pressures<sup>(1)</sup>

See Table 2

### Minimum Pressure Differential

20 psid / 1.4 bar d

### Outlet Pressure Ranges<sup>(1)</sup>

5 to 100 psig / 0.34 to 6.9 bar

See Table 1

### Maximum Emergency Outlet Pressure<sup>(1)</sup>

250 psig / 17.2 bar for all Type 627F actuators  
and Type 6351F pilot components.

### Outlet Pressure Accuracy

±1% of absolute pressure setting<sup>(1)</sup> (psia or bar  
absolute) when inlet pressure is held within  
allowable variations shown in Table 3; droop does  
not exceed 1% of absolute pressure setting for  
flow rates shown in Tables 6 through 8.

### Flow Coefficients

See Table 4

### IEC Sizing Coefficients

See Table 5

### Typical Regulating Capacities

See Tables 6 through 8 and Capacity  
Information section

### Typical Performance Curve

See Figure 3

### Construction Materials

#### Type 627F Main Regulator

Body: Ductile iron (**standard**) or steel

Spring Case and Diaphragm Case: Die cast  
Aluminum (**standard**), Ductile iron, or Steel

Orifice: Aluminum (**standard**) or Stainless steel

### Construction Materials (continued)

Disk Assembly: Aluminum (**standard**) or  
Stainless steel holder with Nitrile (NBR) disk

O-Rings and Diaphragm: Nitrile (NBR)

Tension Spring: Plated steel

#### Type 6351F Pilot

Body: Stainless steel

Spring Case: Aluminum

Diaphragm: Nylon fabric coated with Nitrile (NBR)

Inner Valve Plug: Stainless steel/Nitrile (NBR) or  
Stainless steel/Fluorocarbon (FKM)

Stem: Stainless steel

Control Spring: Zinc-plated steel

Valve Spring: Stainless steel

Pusher Post: Aluminum or Stainless steel

Diaphragm Plate, Lower Spring Guide, and  
Adjusting Screw: Zinc-plated steel

### Temperature Capabilities<sup>(1)</sup>

-20 to 180°F / -29 to 82°C

### Pressure Registration

External through 1/4 NPT (internal) control  
line connection (see Figure 2)

### Pilot Spring Case Vent Connection

1/4 NPT (internal) with removable screened  
vent assembly

### Pilot Connections

1/4 NPT (internal)

### Approximate Weights

**NPT body with Ductile Iron or Steel Casings:**

10 pounds / 4.5 kg

**NPT body with Aluminum Casings:**

6.3 pounds / 2.9 kg

**Flanged body with Steel Casings:**

18 pounds / 8.2 kg

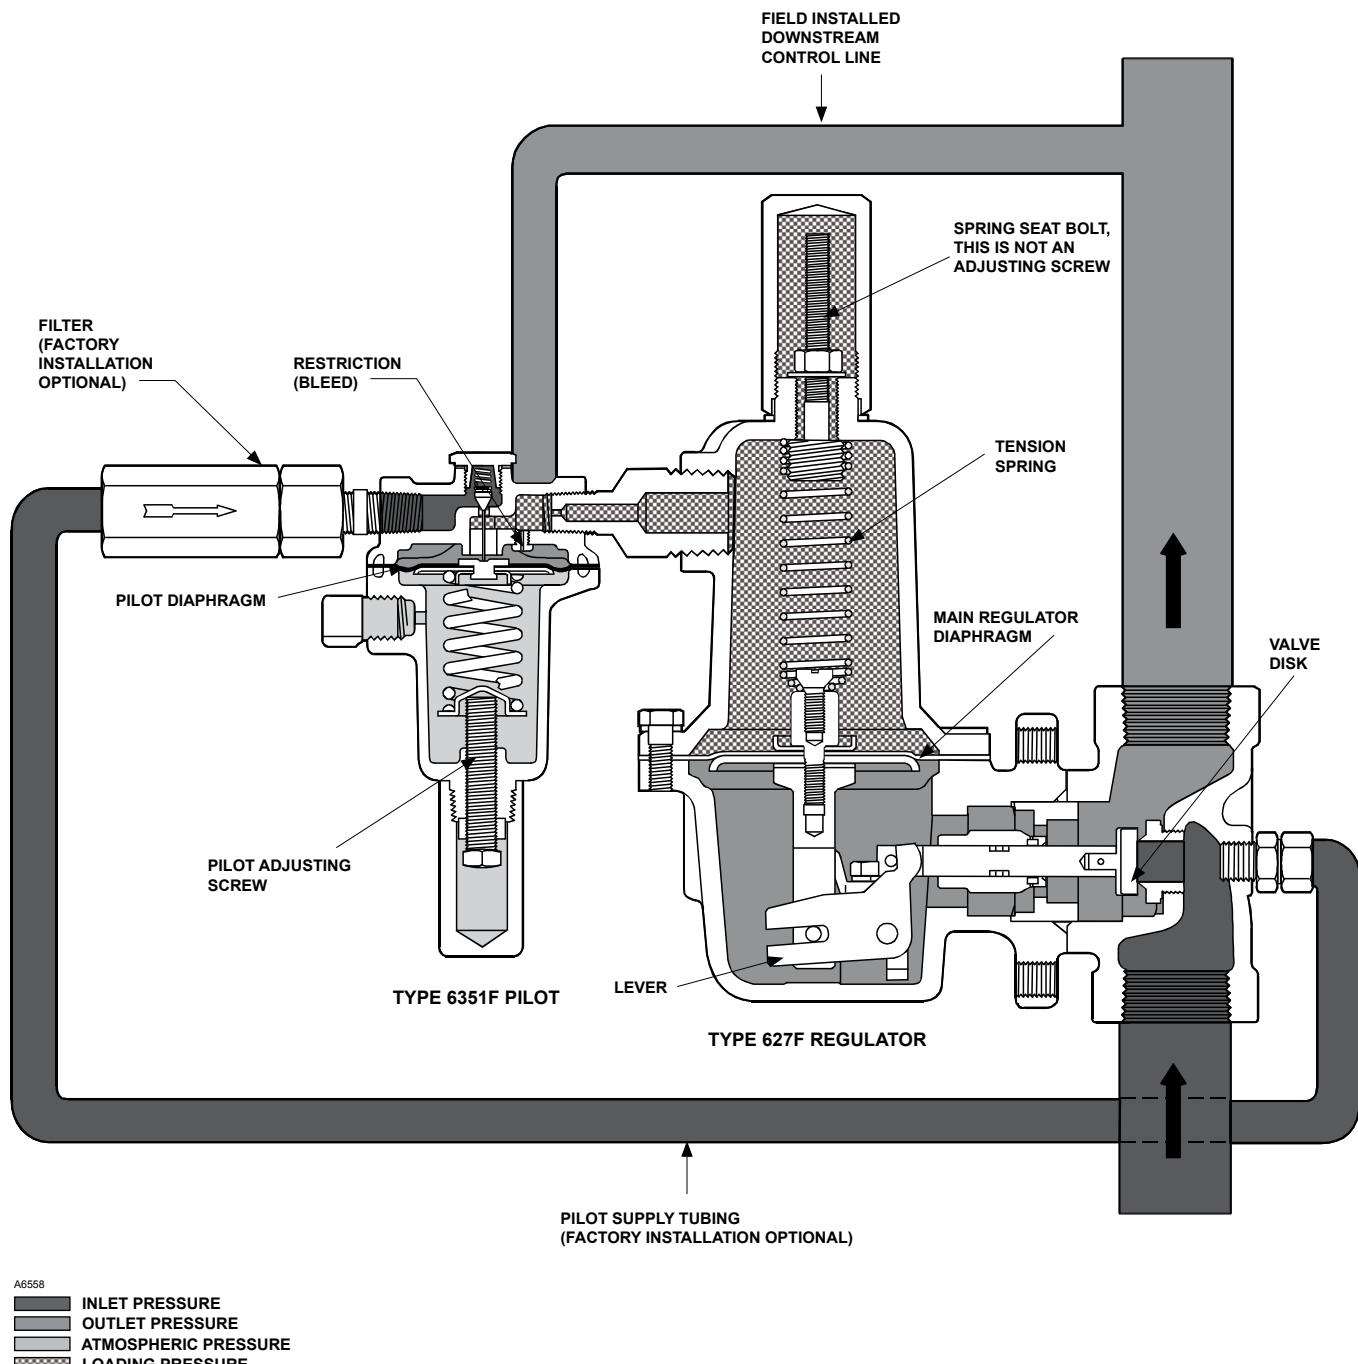

**Flanged body with Ductile Iron Casings:**

14 pounds / 6.4 kg

### External Dimensions

See Figure 4

1. The pressure/temperature limits in this Bulletin and any applicable standard or code limitation should not be exceeded.

## Principle Operation

The superior performance of a Type 627F regulator is due to the amplifying effect of the pilot and the two-path control system (Figure 2). Changes in outlet pressure act quickly on the main regulator diaphragm which repositions the valve disk to provide fast response to system changes. Simultaneously, the pilot amplifies system pressure changes to position the main regulator valve disk for precise pressure control.

Inlet pressure is used for the pilot supply pressure. If downstream flow increases, lowering the outlet pressure below the regulator setpoint, pressure on the pilot diaphragm and the lever side of the main regulator diaphragm decreases. The pilot opens to supply the required loading pressure increase. The increased loading pressure from the pilot overcomes the main regulator spring force, and the main regulator valve disk moves farther open to supply the required flow. When downstream pressure increases due to lowered demand, greater pressure is registered on the pilot diaphragm and the lever side of the main regulator diaphragm. The pilot closes, and the excess loading pressure bleeds off to downstream, through the pilot restriction. With the lower loading pressure, the spring can move the main regulator disk closer to the orifice.

Under no flow conditions, the excess loading pressure bleeds through the pilot restriction to the downstream system until the loading pressure and outlet pressure equalize. The main valve is closed by the spring and the bleed stops.

## Installation

The Type 627F regulators may be installed in any position, as long as flow will be in the same direction as that indicated by the body arrow. These regulators should be installed so that their spring case vents are protected from anything that might clog them.

Emerson™ provides an instruction manual with every regulator shipped. Refer to this for complete installation, operation, and maintenance instructions. Included is a complete listing of individual parts and recommended spare parts.

## Overpressure Protection

Overpressurizing any portion of a regulator or associated equipment may cause personal injury, leakage, or property damage due to bursting of pressure-containing parts or explosion of accumulated gas.

To avoid overpressure, provide appropriate pressure relieving or pressure limiting devices to ensure that none of the limits in the specifications section is exceeded. Regulator operation within ratings does not prevent the possibility of damage from external sources such as debris in the pipeline. Inspect the regulator for damage after any overpressure condition.

Refer to the relief sizing coefficients in the specifications table and the Capacity Information section to determine the required external relief valve capacity.

## Capacity Information

Natural gas regulating capacities at selected inlet pressures and outlet pressure settings are given in Tables 6 through 8. Flows are in SCFH (60°F and 14.7 psia) of 0.6 specific gravity natural gas. To determine the equivalent capacities for other gases, multiply the table capacity by the following appropriate conversion factor: 0.775 for air, 0.789 for nitrogen, 0.625 for propane, or 0.548 for butane. For gases of other specific gravities, multiply the given capacity by 0.775, and divide by the square root of the appropriate specific gravity.

Then, if capacity is desired in normal cubic meters per hour (Nm<sup>3</sup>/h) at 0°C and 1.01325 bar, multiply SCFH by 0.0268.

To determine wide-open flow capacities for relief sizing use the following formula:

$$Q = \sqrt{\frac{520}{GT}} C_g P_1 \text{SIN} \left( \frac{3417}{C_1} \sqrt{\frac{\Delta P}{P_1}} \right) \text{DEG}$$

where,

$C_1 = C_g/C_v$  (see Specifications table)

$C_g$  = Gas sizing coefficient (see Specifications table)

$G$  = Gas specific gravity (air = 1.0)

$P_1$  = Valve inlet pressure, psia

$\Delta P$  = Pressure drop across valve, psi

$Q$  = Gas flow rate, SCFH

$T$  = Absolute temperature of gas at inlet, °Rankine

To obtain the published capacities, the inlet and outlet piping should be the same as the regulator size.

## Ordering Information

### Application

When ordering, specify:

1. Type of regulator
2. Body size
3. Body material and trim material
4. Orifice size in inches / mm
5. Control spring range in psig / bar

### Construction

Refer to the specifications and to each referenced table; specify the desired selection whenever there is a choice to be made. The standard assembly position is shown in Figure 1, but an alternate assembly position may be factory-ordered or can be accomplished in the field by unbolting the body or spring case using the instructions in the appropriate section of the instruction manual. For installation dimensions, refer to Figure 4.

## Ordering Guide

### Body Material, Body Size, and End Connection Style

(Select One)

#### Ductile Iron

- 3/4 NPT\*\*\*
- 1 NPT\*\*\*
- 2 NPT\*\*\*

#### WCC Steel

- 3/4 NPT\*\*\*
- 1 NPT\*\*\*
- NPS 1 / DN 25, CL150 RF\*\*
- NPS 1 / DN 25, CL300 RF\*\*
- NPS 1 / DN 25, CL600 RF\*\*
- NPS 1 / DN 25, PN 16/25/40\*\*
- 2 NPT\*\*\*
- NPS 2 / DN 50, CL150 RF\*\*
- NPS 2 / DN 50, CL300 RF\*\*
- NPS 2 / DN 50, CL600 RF\*\*
- NPS 2 / DN 50, PN 16/25/40\*\*

### Spring Case and Diaphragm Casing Material

(Select One)

- Aluminum\*\*\*
- Ductile iron\*\*\*
- WCC steel\*\*\*

### Trim Material (Select One)

- Aluminum\*\*\*
- Stainless steel\*\*\*

### Orifice Size (Select One)

- 3/8 x 1/8-inch / 9.5 x 3.2 mm\*\*
- 3/8 x 1/4-inch / 9.5 x 6.4 mm\*\*
- 3/8-inch / 9.5 mm\*\*\*
- 1/2-inch / 13 mm\*\*\*

### Outlet Pressure Range (Select One)

- 5 to 35 psig / 0.34 to 2.4 bar, Unpainted\*\*\*
- 35 to 100 psig / 2.4 to 6.9 bar, Red\*\*\*

### Pilot Supply Filter (Optional)

- Type P594-1

### Pilot Supply Steel Tubing (Optional)

- With Type P594-1 Filter
- Without Filter

### Replacement Parts Kit (Optional)

- Yes, send one replacement parts kit to match this order.

# Bulletin 71.2:627F

Regulators Quick Order Guide	
***	Readily Available for Shipment
**	Allow Additional Time for Shipment
*	Special Order, Constructed from Non-Stocked Parts. Consult Your local Sales Office for Availability.

Availability of the product being ordered is determined by the component with the longest shipping time for the requested construction.

## Specification Worksheet

### Application:

Specific Use \_\_\_\_\_

Line Size \_\_\_\_\_

Gas Type and Specific Gravity \_\_\_\_\_

Gas Temperature \_\_\_\_\_

Does the Application Require Overpressure Protection?

Yes  No If yes, which is preferred:

Relief Valve  Monitor Regulator  Shutoff Device

Is overpressure protection equipment selection assistance desired? \_\_\_\_\_

### Pressure:

Maximum Inlet Pressure ( $P_{1\max}$ ) \_\_\_\_\_

Minimum Inlet Pressure ( $P_{1\min}$ ) \_\_\_\_\_

Downstream Pressure Setting(s) ( $P_2$ ) \_\_\_\_\_

Maximum Flow ( $Q_{\max}$ ) \_\_\_\_\_

### Performance Required:

Accuracy Requirements? \_\_\_\_\_

Need for Extremely Fast Response? \_\_\_\_\_

### Other Requirements:
